Course Summary	Course Summary	Course Summary	Course Summary
This course prepares students to understand the basics of computer components, operating systems, applications and networking principles.	In this course, students will install, upgrade repair configure, optimize troubleshoot, and perform preventative maintenance on basic personal computer hardware and operating systems. Students will work with Windows and different variants of Linux operating systems and install troubleshoot and update applications for each.	This course builds on your existing user-level knowledge and experience with personal computer operating systems and networks to present fundamental skills and concepts that you will use on the job in any type of networking career.	This course encompasses foundational information security principles for network security and enterprise risk management. You will be able to identify and mitigate risk; apply security controls to protect confidentiality, integrity and availability; understand typical security technologies and identify and troubleshoot security events and incidents.
